FOOTNOTES

Note: Total numbers of species cannot be directly obtained by adding the various State totals because many species occur in more than one State. Changes in numbers of threatened, endangered, or candidate species and estimated habitat are based on U.S. Fish and Wildlife Service changes in candidate species definitions; more current data based on recent investigations; further verification of a species' presence on public land; and clearance activities related to rights-of-way, oil and gas leases, mining permits, and other activities.

- /a/ Alaska has no threatened or endangered species.
- /b/ Includes recovery plans that have been prepared, approved, and are in the process of being implemented. The total number of plans cannot be directly obtained by adding the State totals because one plan may cover more than one State.
